VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1959

Production of the 27 principal fresh market vegetables and melons in 1959 was 3 percent less than in 1958, the Crop Reporting Board announced today. The 1959 production of 206.5 million hundredweight compares with 213.4 million hundredweight in 1958 and was about average. The decline from last year resulted primarily from smaller watermelon production which was 29 percent below the record 1958 output. Four vegetables--onions, sweet corn, escarole and garlic--set new record highs on production. Other vegetables with considerably larger supplies in 1959 than a year earlier were celery and tomatoes. Lettuce, green pepper and cantaloup crops were also above last year. Production of cabbage and carrots was considerably below the 1958 output while slightly smaller crops of cauliflower, cucumbers and spinach were produced. Value of the principal vegetable and melon crops totaled \$792,435,000 in 1959, up 4 percent from the 1958 value of \$762,395,000. Tomatoes and lettuce, the only two crops with over 100 million dollars value, account for 34 percent of the total.

Strawberry production in 1959 at 474.7 million pounds was 11 percent below 1958 and 9 percent above average. Generally higher prices were received for the 1959 crop and total value was nearly the same as in 1958.

Several changes in rank occurred in the five leading vegetable producing States but California still dominates the picture. Acreage wise, Florida moved into the second spot which Texas held last year. New York is in fifth place and Georgia dropped out of the first five. Production wise, Arizona took over fourth place which New York held in 1958. There was no change from last year in the ranking of States according to value of production.

LEADING FRESH MARKET VEGETABLE STATES IN 1959

Rank	Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	22.1	California	33.5	California	40.1
2	Florida	14.4	Florida	11.7	Florida	15.2
3	Texas	14.3	Texas	8.2	Arizona	6.4
4	Arizona	4.9	Arizona	6.8	Texas	6.0
5	New York	4.7	New York	6.4	New York	4.7

The estimates in this publication relate primarily to fresh market production. While the estimates for many of the vegetable crops include only fresh market production, those for a few crops, such as broccoli and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh-market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production. "Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. "Value" is for the marketing season or crop year and does not correspond to calendar year income. Group and All States averages are simple averages of annual data.

This summary, issued by the Crop Reporting Board, provides fresh market estimates of acreage, production, and value for the 27 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on 81 percent of the national output of all vegetables and melons grown for fresh market sale. Fiscal limitations prevent including all vegetables in all States in this program. Estimates of mint for oil and strawberries are also in this report. These data are based upon information secured by State Agricultural Statisticians from growers, shippers, processors, public agencies, and other sources.
